FIRST PROJECT FOR TOKHEIM

Civil Engineering Division has been awarded a first contract for Tokheim, which is one of the world’s largest providers of fuel retailing solutions.

Our input will see the provision of enabling works for a new finished goods staging store at the Tokheim manufacturing works in Dundee. Our scopes include tree removal, re-alignment of a section of private road, the construction of a reinforced concrete raft floor slab and the construction of various concrete hardstandings. We shall also install sections of road crash barriers and construct a surface water drainage and disposal system.

On completion of our work, a temporary/relocatable building will be supplied and erected by a specialist contractor.

The client’s team includes Architect Gaudie Wright and Partners and Engineer Fairhurst. The scheme will begin in January 2018 and will be completed in 8 weeks.
