Civil Engineering Division is pleased to announce that we have commenced the Dundashill Project delivering the enabling works to a former brownfield site in the centre of Glasgow. The 15 acre former distillery site will be turned into a 600 home residential development. This award is our first contract with new client Igloo Regeneration who are working in partnership with Scottish Canals and Glasgow City Council.

The site located in the Port Dundas area is bordered by the Clyde and Forth Canal to the south and there are residential and industrial properties to the north, east and west of the site. A particular challenge relates to an electrical sub-station located within the site which we are required to give 24/7 access to the statutory authority.

The works generally will comprise of:

- Breaking out of concrete slabs and existing foundations and crushing (20,000m³)
- Remediation of contaminated embankments and platforms
- Cut/Fill platforming works
- Construction of Gabion and Earth Retaining Structures
- Construction of 3m x 1.8m high concrete channel to mimic existing adjacent canal (150m)
- Infrastructure drainage, services and roadworks
- High specification soft and hard landscaping works

The contract commenced 30th April 2018 and will take 47 weeks to complete.
