CONTRACT AWARD – HERIOT WATT DRAINAGE PROJECT

Civil Engineering Division is very pleased to announce that we have secured a contract with new client Heriot Watt University.

The project involves the full replacement of defective foul and storm drainage, which runs down one of the main access roads to the university campus in addition to installing a new water main. The project presents some technical challenges, as we have to keep the access road operational throughout the works, which will require close traffic management. In addition, we will have to work around live services and tie the new drainage into the existing drainage system.

The programme for the project is 15 weeks starting in late May.

This is an exciting opportunity to work for a prestigious Scottish University with an ambitious investment programme for the future! We hope it is the first of many projects at the campus.
